

Cross-Reference Report

Scope

Reviewed internal references expressed as file paths, canonical artifact names, figure identifiers, bibliography-system references, and contract names.

Result

No cross-reference target was intentionally renamed. Existing literal paths, citation keys, schema fields, and identifiers were preserved. Named contract references were normalized without changing targets.

Outstanding work

Word field-based cross-references and equation numbering remain dependent on the later publication-copyedit pass because the attached repository contains infrastructure documents rather than the complete paper corpus.
