

Computational Interaction Science Publication Infrastructure v1.1.1

Editorial normalization release. Version 1.0 theory, ontology, contracts, and formal semantics are unchanged.

This package improves supporting research infrastructure without changing Version 1.0 theory.

Contents

Bibliography and audits

Citation map, source matrix, and evidence register

Experimental, measurement, and replication handbooks

Reporting and contract templates

Dataset schema and data dictionary

Figure library and catalog

Author and maintenance guides

Completeness, quality, maintenance, and readiness reports

Corpus statistics

```
{  
  "entries": 312,  
  "with_doi": 15,  
  "doi_valid_format": 15,  
  "with_valid_isbn": 3,  
  "with_volume": 53,

  "complete_core": 312  
}
```

Validation boundary

Identifier format, ISBN checksum, duplicate-title, and metadata-completeness checks are automated. Publisher/Crossref authority validation is not claimed for unresolved records. No missing metadata was invented.
