

Computational Interaction Science Paper

Dependency Graph

Imports, dependencies, and exported reusable artifacts

Dependency chain: Scientific Objects -> Representation -> Meaning Architecture -> Opportunity -> Interaction -> Behavior -> Measurement -> Similarity -> Transfer -> Strategy -> Formal Models -> Prediction -> Comparative Interaction -> Synthesis.

Paper	Required foundations	Primary exports
How Sciences Define Their Objects	Scientific-object architecture	Object, explanandum, evidence architecture
Can Interaction Become a Primary Scientific Object?	Scientific object test	Interaction as legitimate explanandum
Representation, Invariance, and Projection	Scientific-object architecture	Projection contract and typed equivalence
Ontology, Semantics, Representation, and Interpretation	Representation theory	Relational meaning architecture
Opportunity, Affordance, and Action Availability	Meaning and projection	Typed opportunity model and contract
Interaction	Opportunity and relational architecture	Interaction ontology, algebra, contract
Behavior	Interaction	Trace model and behavioral evidence contract
Measurement	Interaction and behavior	Measurement contract and evidence hierarchy
Interaction Similarity	Measurement	Typed similarity contract
Interaction Transfer	Similarity and measurement	Transfer ontology and protocol
Interaction Strategies	Behavior and transfer	Strategy ontology and inference protocol
Formal Models of Computational Interaction	All preceding ontology	Layered formal foundation
Predicting Interaction	Formal models and measurement	Prediction framework and uncertainty model
Comparative Interaction	Similarity, measurement, prediction	Gate-and-profile comparison method
Computational Interaction Science	Complete corpus	Interdisciplinary synthesis and research program
