

Computational Interaction Science Reference Corpus

Artifact inventory and maintenance rules

Canonical artifacts

- Computational_Interaction_Science_Bibliography.bib
- Computational_Interaction_Science_References.docx
- Computational_Interaction_Science_Citation_Map.docx
- Computational_Interaction_Science_Reading_Guide.docx
- Computational_Interaction_Science_Concept_Source_Matrix.docx
- Computational_Interaction_Science_Paper_Dependency_Graph.docx

Maintenance rules

- Use the BibTeX file as the machine-readable system of record.
- Do not invent missing DOI, ISBN, issue, or page metadata.
- Normalize duplicate entries before adding new citation keys.
- Record which concepts each source supports; do not treat citation frequency as evidential strength.
- Update dependencies whenever a paper imports or revises a canonical artifact.
- Retain contradictory and falsifying sources in the citation map.

Extraction coverage

References were consolidated from the completed authored papers available in the project workspace. Foundational source books supplied as background were not recursively mined for their own bibliographies.
