

Citation Key Guide

Canonical keys are preserved from the richest retained source record to avoid breaking existing citations. Duplicate keys are listed as aliases in the audit.

Policy

1. Existing canonical keys are immutable within Version 1.x.
2. New keys use `familyYYYYshorttitle`; add a lowercase suffix only for collisions.
3. Do not encode journal, publisher, or edition in a key.
4. Key redirects must be recorded in the duplicate report.
5. A future major version may migrate keys only with an automated mapping file.
