

Publication Readiness Assessment

Determination

The bibliography is publication-ready for controlled internal citation and manuscript preparation, but not yet authority-complete for final external release.

Blocking items for final external release

- Exact authoritative matching for every reference actually cited in the release manuscript.
- Resolution of the malformed Sen and Wasow DOI.
- Manual review of near-duplicate and multiple-edition groups.
- Publisher or national-library verification of book ISBNs and editions.
- Retraction/correction review for cited journal articles.

The protocol's non-inference requirement has been preserved: all unverified fields remain blank or explicitly unresolved.
