

Reference Audit Report

Scope

All 312 source BibTeX records were parsed, normalized, and evaluated. Exact duplicates were grouped by normalized title and year. The richest record was retained without changing theoretical content.

Results

- Original records: 312
- Canonical records: 267
- Exact duplicate records merged: 45
- Records with DOI: 14
- DOIs with valid syntax: 14
- Malformed DOIs: 0
- Records with ISBN: 4
- ISBNs with valid checksum: 4
- Records with volume: 52
- Records with issue: 52
- Records with pages: 107
- Individually externally corroborated records: 2

Verification classes

- Authority-verified: supported by an authoritative publisher or registry record.
- Externally corroborated: supported by an external bibliographic result, but not a machine-retrieved registry record.
- Syntax/checksum valid, authority unresolved: identifier format is valid but the authoritative record was not retrieved.
- Unresolved: no authoritative exact match was established.

Finding

The bibliography is normalized and auditable. It is not fully authority-complete because most entries lack registry-verified metadata. Unresolved fields are retained as blanks and enumerated in `Missing_Metadata_Report.csv`.
