

Outstanding Editorial Issues

Repository boundary

The attached archive contains the publication-infrastructure repository, not the complete Knowledge System of Record and research-paper corpus. Corpus-wide definition and paper-heading verification therefore cannot be completed from this archive alone.

Bibliography

Authority validation, duplicate resolution, and missing metadata remain separate bibliographic-verification work.

Figures

Only one reusable canonical figure is present. Source figures, editable originals, captions, accessibility text, and rights status remain incomplete.

DOCX fields

Generated DOCX files use static headings and text. Dynamic Word cross-reference fields, equation sequences, and indexes require the final publication assembly.
