

Consistency Report

Version 1.0.0-integration.1

Findings

No-change confirmations

No canonical definitions were replaced with newly invented theory. No research paper or source artifact was modified.

Issue register

Issue	Finding	Classification	Required disposition
Authority status	Current ontology and glossary are marked provisional drafts, while the archive is labeled Version 1.0.0.	Structural governance inconsistency	Ratify or explicitly label the integrated outputs as release candidates.
Contract naming	The Opportunity Contract section begins with the words "Projection contract."	Terminology inconsistency	Correct as an editorial label change in the contracts source during specification work.
Contract coverage	The consolidated contracts file includes Projection through Prediction but does not yet contain a fully normalized Comparison Contract.	Incomplete consolidation	Extract and normalize the Comparison Contract in the formal specification phase.
Concept provenance	Some glossary terms occur broadly across papers, making automated originating-paper attribution approximate.	Provenance limitation	Manually ratify originating-paper ownership during publication audit.
Supporting literature	Concept-source matrix coverage is uneven and some entries are represented mainly through document tables.	Reference incompleteness	Complete metadata and concept-source validation in the research infrastructure phase.
Operationalization	Several constructs are operationalizable in principle but lack one ratified measurement protocol.	Incomplete operationalization	Address in the experimental handbook; do not change definitions.
Figure captions	Many DOCX files contain embedded media without explicit Word caption paragraphs.	Figure governance gap	Assign canonical figure IDs and captions in the figure-library phase.
Theory maturity	No concept is marked Validated or Canonical in the source glossary.	Publication readiness limitation	Retain Proposed status until empirical validation or formal ratification.
